

## Apostolic Carmel High School & Junior College, Bandra (W).

### National Science Day – 28<sup>th</sup> February 2023.

National Science Day is celebrated every year on 28<sup>th</sup> February to mark the discovery of the 'Scattering of light' or 'Raman Effect' by Sir Chandrasekhara Venkata Raman also known as C.V. Raman on 28<sup>th</sup> February 1928. It was this discovery that got Sir C.V. Raman a Nobel Prize in Physics in 1930.

Science is defined as the observation, identification, description,

experimental investigation, and theoretical explanation of natural phenomena. Science Day is a day where people can learn about it and its impact on our lives. It can also be a way to get children excited about science and what they might want to do in the future.

National Science Day is being celebrated every year to spread a message about the significance of scientific applications in the daily life of the people.

- To raise awareness of the importance of science.
- To display all the activities, efforts and achievements in the field of science for human welfare.
- To discuss all the issues and implement new technologies for the development of science.
- To give an opportunity to the scientific-minded citizens in the country.
- To encourage the people as well as popularize Science and Technology.

We at Apostolic Carmel High School and Junior College, Bandra (W) as an educational institution celebrated this day by organizing lectures, quizzes & various science projects prepared by the students. Our dear Principal Sr. Marisa encouraged the students to live, learn and explore and to Contribute to the beautiful world of Science. She encouraged the students to invent new things and be pioneers of a developed society.

**Happy National Science Day 2023!**
