

Aerobin: The waste revolution for modern living

On the occasion of Soil Day, Apostolic Carmel High School invited the Ngo Mother-son to demonstrate the working of an Aerobin Composter with the aim to reduce wet waste on the campus, but more importantly to sensitize the students to the urgent need of following the same procedure in their homes.

An Aerobin Composter is a closed bin into Biodegradable waste is to be put.

Students of Std VII and Std VIII attended the demonstration under our old rain tree. The animators Ms. Swejal, Mr. Sachin and their team Roshan clearly walked the students through the process of segregating the garbage categorically into wet waste, plastic, MLP, tetra packs which students will be required to follow on campus herewith.

Our Principal inaugurated one of the 3 bins which will be operative on campus.

Apostolic Carmel High School has always been conscientious about caring for its beautiful natural surroundings. We hope that with this aerobin Composter, we ignite the enthusiasm of our students to be more earth friendly.

The CCGG (Carmel Convent Green Giants) will be overseeing the project and ensure its smooth working.
